I help founders, investors and lean teams turn hard technical bets — blockchain infrastructure, AI-agent systems, data-heavy products — into working software. I work from goals to architecture, implementation and deployment, with an AI delivery system that lets a small team ship like a large one, without losing quality.

01 Focus

Software development

Architecture to deployment: products, backend services, integrations, blockchain systems.

Agentic delivery systems

A delivery harness for lean teams: agents with guardrails, reviews and cost control. Speed without the mess.

Technical due diligence

Risk assessment for investors and acquirers: architecture, code, security, smart contracts.

Technical leadership

Senior technical direction without a full-time CTO: architecture, standards, business analysis, hiring.

02 Key roles

2025—2026 · France

Validité

Founder & CTO

Designed and built a textile evidence and digital product passports platform, from data model to public viewers, with my own AI delivery system. Built supplier-certificate extraction, material accounting and AI-assisted verification.

2025—now · France

Pilier Network

Co-Founder & Chief Architect

Designed network token economics and developed Rust/Substrate modules for access rights, document registration and product lifecycle records. Worked across infrastructure deployment, network releases and upgrades, and operations monitoring.

2022—2025 · New Zealand

Futureverse

Principal Blockchain Engineer

Defined company-wide smart-contract engineering standards for security, gas optimisation and testing. Designed protocol systems including DeFi staking, asset and metadata registries, access management, a multisig wallet, crowdfunding and a token bridge. Led technical due diligence for partner projects.

2007—2010 · Russia

Prostor

CIO

Built the CRM and ran IT for a multi-branch real-estate agency: office infrastructure, inter-office workflows and systems integration.

2004—2007 · Russia / France

Nival Interactive

Head of Development

Heroes of Might and Magic V for Ubisoft. Led production across offices, managing large teams and multi-million-dollar budgets and delivering to schedule. Introduced Scrum on Blitzkrieg 2 in 2005.

03 Blockchain development

ThinkAgents Web3 development	Developed the project's entire staking system; worked on token economics and supporting infrastructure, including data services such as The Graph.	**2025**
Immutable Web3 Engineer	Contributed to Ethereum Layer 2 scaling, developer tools, SDKs, engine internals and the IMX marketplace across Go/AWS backend services and React/TypeScript interfaces.	**2021—2022**
Holvi.finance Smart contracts dev	Designed staking strategies, audited core smart contracts and improved CI/CD deployment pipelines.	**2021**
Dasset Backend development	Developed exchange backend services with AWS DynamoDB data modelling, Cognito authentication and Bittrex API integrations.	**2020**
Blockchain Labs Smart contract auditor	Audited smart contracts and business logic of Ethereum projects through static, dynamic and functional analysis; co-designed the Verified Token framework. Contributor to public collections of smart-contract development tools and guides.	**2018—2020**

04 Agentic delivery system

For solo founders and lean teams: a product built fast, ready to scale, and built to pass the technical due diligence by investors.

01 AI harness

Task scoping and estimation, coordinated agents, review records.

02 Guardrails

Rules checked before every tool call; explicit roles and file boundaries.

03 Cost efficiency

A dashboard that tracks AI spend and cuts token use across runs.

04 Repeatable setup

Deployment tooling, CI/CD automation, configuration tests.

05 Entrepreneurship

Early 2010s

RealHot.ru

Founded and ran a Thai real-estate agency serving Russian buyers, managing business development, sales and operations, then sold it.

Early 2000s

General.ru

Founded and ran a web agency, handling business development, client projects, design and technical delivery.

Early 2000s

Notebooki.ru

As founding developer, handled the full development cycle of one of Russia's early e-commerce stores.

Also

Retreat travel agency — adventure paired with inner practice: diving and meditation, Taoist practices, massage trainings and temples in Thailand, Himalayan treks with meditations, Four Sacred Taoist mountains in China, etc.

Revenue-share web sales — ran sales websites for a construction company, paid as a percentage of sales.

06 Stack, education & languages

Engineering. Rust, Solidity, Go, TS/JS, Python, AWS, Postgres, DynamoDB, CI/CD, product design and architecture.

Blockchain. Ethereum, Solana, Substrate, EVM, ZKP, Layer 1/Layer 2, oracles, smart contracts, staking, bridges, tokenomics.

Management. Scrum/Agile, delivery planning, multi-million-dollar budgets, distributed teams, Waterfall-based AI shipping.

BSc Computer Science · Aspire2 International, New Zealand

Diploma in Engineering · Moscow State University of Civil Engineering

MSc in Psychology · Moscow State University of Psychology and Education

PSM I · Professional Scrum Master, Scrum.org

Russian	native
English	fluent
French	B1, learning

Available for contract projects, operational assistance, technical due diligence, fractional leadership.
